

OFF-SITE CONSTRUCTION

Plan Review & Inspection

Technology has altered many industries over the years, and the construction industry is no different. The combination of traditional construction and high-tech manufacturing has changed the landscape by creating an entirely new way to plan, design, fabricate, and assemble buildings of all sizes. Referred to as off-site or modular construction, this marriage of manufacturing with technological advancement has become the way of the future.

ICC NTA is a third-party agency and an industry leader in plan review and inspection for code compliance in the off-site construction industry. Being a member of the International Code Council family of solutions, a trusted source with recognized code officials globally, you can have confidence your project is in good hands. ICC NTA can provide you fast turnaround times, quick answers to any questions or issues that may arise, and can offer inspectors you can trust nearby. With extensive knowledge in the off-site construction industry, including multiple building types and disciplines, ICC NTA has certification programs that are accepted in all 50 states, the District of Columbia, and Canada.

PLAN REVIEW

ICC NTA is accredited to ISO/IEC 17065 and has professional engineers and certified ICC level III plan reviewers experienced in the off-site construction industry. Being an industry leader, ICC NTA is accepted in all states, with certification programs providing third-party plan reviews.

INSPECTION

ICC NTA maintains one of the largest manufacturing inspection workforces and has certified ICC level I and II and state-certified inspectors in your area. With this national workforce and network of third-party inspectors, ICC NTA can assess in-plant quality control procedures, ensuring consistent quality of your product for code compliance with an inspector near you.
